1 Introduction

This document has been produced as a guide for Software vendors and developers of healthcare practice management application software (PMA) to ensure an effective implementation of the MediSwitch Web Services functionality into their products.

The purpose of this document therefore is to provide examples of how a WebService message would look that is to be transported via WebService to MediSwitch. This will ensure for optimized business processes and the efficient switching of data from the Healthcare Service Providers practice.

2 WebService Function Calls

2.1 Echo Function Call
